Questions

# The Rise of Test Automation

- **Test Automation** is now a “must have”
  - Time to market considerations
  - The shift to agile and DevOps practices
  - Increasingly complex applications
- Test Automation has become a foundational aspect of the testing process
- Yet manual testing is still very much alive, with only **40-50%** of testing processes automated.
- The World Quality Report’s key findings for 2018-2019 state that ‘**low levels of test automation**’ are holding back quality assurance and testing teams.

YOUR INDEPENDENT MICRO FOCUS SOFTWARE USER COMMUNITY

# But How do We Get There?

- **Key Recommendation from 2018-2019 Quality Report:**
  - “Increase the level of basic and smart test automation, **but do so in a smart, phased manner.**”
- **Synonyms for ‘smart’ include:** *clever, bright, intelligent, sharp, sharp-witted, quick-witted, astute, acute, apt, and able.*
  - *Test Automation adoption involves: People, Process, and Technology*

# People, Process, Technology

- “... but do so in a **smart, phased manner.**”
- PMOs, Project Managers, and Business Analysts are accustomed to ALM for reporting. **People** are invested in a specific manner of reporting for budgetary decision-making.
- Test **Process** for System, Integration, and UAT may be manual-intensive – but unit and regression test process has ample room for test automation.
- Automated Testing **Technology** paired with people and process engineering can help deliver in a ‘smart’ manner.

... **but, what about your toolchain?**

YOUR INDEPENDENT MICRO FOCUS SOFTWARE USER COMMUNITY

# The Impact on the IT Toolchain

- A new breed of test automation tools have flooded the market
- A mentality shift to using the tools that work best for the team appears to be the “smarter” choice for a variety of reasons.
  - Including a combination of **both open source and commercial tools**

2016

2019

## Add to that:

- **Offshoring or outsourcing** of some testing activities (e.g., Test Factories)
- Decades of mergers and acquisitions that have resulted in multiple instances and versions of tools

YOUR INDEPENDENT MICRO FOCUS SOFTWARE USER COMMUNITY

# How does this impact reporting?

With test planning, design, execution and reporting split across multiple tools, software delivery leaders have lost visibility into coverage, quality and cost

YOUR INDEPENDENT MICRO FOCUS SOFTWARE USER COMMUNITY

# Sound Familiar?

- **VP Quality Assurance**
- **QA Director**
- **Test Manager**
- **Test Leads**
- **Program QA Consultant**
- **PMOs**

How quickly are defects being resolved?

How many tests have been executed and passed?

How many requirements were covered?

Are we ready to release?

How many blocking defects remain?

YOUR INDEPENDENT MICRO FOCUS SOFTWARE USER COMMUNITY

# Micro Focus ALM's Core Capabilities

**Single, scalable platform that enables a consistent, repeatable process for:**

- Requirements Management
- Test Planning, Scheduling & Execution
- Release & Cycle Management
- Defect Management
- Real time reporting of progress and status
- Integration with Developer environments

Facilitates **distributed collaboration** and communication between QA teams, developers and business analysts on a single platform

Allows organizations to **lower costs** by capturing critical defects before they reach production

Enables organizations to manage the release process and make **informed go/no go** decisions through real time reports

# How Do We Solve?

Tools like Tasktop support software delivery organizations as they evolve their test management processes and tools, by creating a seamless user experience, centralizing data for cross-tool reporting in ALM and **restoring visibility and control over product quality**

# Common Entity Graphs

Requirement	Test Plan	Test Lab	Defects
<ul style="list-style-type: none"><li>• Coverage Graph</li><li>• Progress Graph</li><li>• Summary Graph</li><li>• Trend Graph</li></ul>	<ul style="list-style-type: none"><li>• Progress Graph</li><li>• Summary Graph</li><li>• Trend Graph</li></ul>	<ul style="list-style-type: none"><li>• Test Set Progress Graph</li><li>• Test Set Summary Graph</li><li>• Test Run Summary Graph</li></ul>	<ul style="list-style-type: none"><li>• Age Graph</li><li>• Progress Graph</li><li>• Summary Graph</li><li>• Trend Graph</li></ul>

- ALM allows its users to create graphs off entity types (e.g., requirements, test plan, test lab, or defects)
- The most common types of entity graphs include: requirements coverage graph, requirements summary graph, test set summary graph, defect progress graph, defect summary graph, and defect aging.

# Summary

- A balanced approach to People, Process, and Technology helps facilitate a 'smart' transition to increase levels of test automation.
- Statistics still show that nearly 50% of testing is still manual. Value stream integration tools like Tasktop help eliminate the fear of adopting a multi-tool strategy as you increase automation.
- Manual reporting is only necessary when tools are disconnected. By integrating the testing toolchain, you can build real-time reports that show both manual and automated test execution progress.

# Upcoming Vivit Events

June 27, 2019

**Meeting: Vivit Portugal Local User Group Meeting**

9:30 - 12:30 CET

<https://www.vivit-worldwide.org/events/EventDetails.aspx?id=1241430&group=>

July 24, 2019

**Meeting: User Group Treffen "Testen & Test-Management mit Produkten von Micro Focus in München, Germany"**

8:00 - 9:00 AM PDT (Los Angeles), 11:00 AM - 12:00 PM EDT (New York), 17:00 - 18:00 CET (Frankfurt)

<https://www.vivit-worldwide.org/events/EventDetails.aspx?id=1238689&group=>
